

ERIC:::::::::

My name is Eric, I am from Benin Republic. I am a YWeb Student. I am the leader of team A and I am here with my teammate..... Today we would like to talk to you about our YWeb journey for the past 4 month. TO my left is my colleague C. Smith.

Camille:::::::::

My name is C. SMith. I am a MAdison Native. I am the team leader of Team C. I am here with my teammates..... To better present our Yweb Journey as a web developer. We chose to present to you our group project.

1. **OBJECTIVES:**
The Objective was to help a business in madison solve a website problem.
2. **BRAINSTORM:**
We Decided to come together and brainstorm on what business to help.
3. **RESEARCH:**
We then go online to look for businesses in the Madison area that really need help with their online presence. And we all agreed on a salon business called "Lotus Salon"
4. **PLANNING:**
We met everyday to discuss the project and decided to split the group into two teams.
Team A
and Team C which I am the manager of.
5. **DESIGN & DOCUMENTATION.**
We documented every meeting and designed the wireframe for the new website.

***** I'll Pass It On To My Colleague *****

ERIC:::::::::

6. **PROJECT MANAGEMENT:**

We decided to manage the project with two Agile methodologies. Scrum and Kanban

Scrum: We did a 1 week sprint for each section of the website.

Kanban: We use a kanban dashboard on Github to manage the project

7. **TEAMWORK & COLLABORATION:**

This project contributed a lot to our teamwork and collaboration skills. Due to the high level of interactions that happened within each group and between both teams.

8. **FINDING ANSWERS:**

This project requires us to go out there and find answers to our challenges. The approach we took was

using google, youtube, stack overflow, and asking our peers for help.

9. **LIMITATION:**

One thing this project taught us is our present limitations as web developers and how we can improve on them. One of our limitations is the amount of things we are required to know as a web developer which seemed unattainable at the beginning of our journey at YWeb. This project taught us that we

I have to continue to learn to be successful in this field.

10. **TECHNOLOGY**

This project is mainly built with three technologies. HTML, CSS, and Javascript. We have been able to improve our TECHNICAL skills in those areas with this project.

***** I'll Pass It On To My Colleague *****

Camille:::::::::

11. **TIME MANAGEMENT**

Time was one of our biggest constraints. This project contributed to our time management skills due to

the constraints that were placed upon us.

12. **WORKFLOW:**

Our workflow was basic and simple. Each team is assigned a section of the website and within the

teams there is a delegation of duties.

13. **PROBLEM SOLVING**

We are proud to say today that this project has made us a critical thinker and problem solver.

14. **OPEN SOURCE:**

One of our constraints was to build this project with no money. Thanks to the open source community. Every resource used in the development of this project was free and open at no cost. Github for version control, Slack for communication, Slack overflow for finding answers etc.

15. **PEER REVIEW:**

For best practice, we made sure every code we wrote were tested and peer reviewed internally within each team before making a pull request for the other team to re-review and re-test before they are merged to the main project files.

***** I'll Hand It Over To My Colleague *****

ERIC:::::::::

CONFLICTS:

This project would be incomplete if we didn't mention the flicts and issues that were involved.

1. To get every team member to agree on a design approach was a big challenge that required a series of debates and team meetings.
2. Merge conflicts within codes on github that we have to manually go in to fix.

CAMILLE::::::

ADVANTAGES:

The advantages of the project to us as junior Web Developers are:

It improved our technical skills, communication skills, time management skills, made us better team players, motivated us towards our career and be more diligent.

Closing Remark

We want to thank you all for listening. We will be glad to discuss with you further about our personal and group projects if you would like to know more and as well if you have any job opportunity for us.
